

Are You My Match?

Match Shapes of Different Sizes

Shapes can be similar even when they are different sizes. A shape with three sides and three corners is a triangle no matter what size it is. Your children are ready to learn this by matching shapes of different sizes. This activity helps them learn the characteristics to notice (sides and corners) and the characteristics to ignore (size and color) when they sort by shape.

Look What We're Learning

Geometry

- Recognize that shapes can be the same even if sizes differ

Number & Operations

- Verbally count a set of five objects

Social-Emotional

- Take turns

Vocabulary

big
corner
little
same
shape
